BS200 Backplanes

The BS201 to BS216 backplanes mechanically and electrically connect the hardware modules of the M200 control system, such as power supply unit, processor module, and I/O modules. They are the backbone of the controller.

The DIN rail adapters S201, S202, S203 and S205 are mechanically identical in construction, without electrical function and they are used for solitary modules without backplane bus and supply.

Features

- 1 to 16 module slots
- Seamless connectable/extendable
- Stable mechanics / compact design
- Vibration proof fixing of modules
- Can be snapped on EN 60715 DIN rail
